

Reasons to use 3M

3M Window Film Solutions are used for a wide variety of commercial and residential applications including sun control, safety & security, privacy and image enhancement. There are many reasons why customers consistently select a 3M Solution rather than less known companies and products:

1. 3M is recognized around the world for their innovative technologies. They invented window film in 1966 and continue to set the standard for both quality and selection for commercial and residential projects. 3M is the only manufacturer that makes all of its window film components – film, adhesive and UV coating.
2. We recognize that the product is only part of the story. In Canada, we provide a national team of Certified Dealer/Applicators, most of whom have been representing 3M Window Film for over 15 years, to ensure that every project is a success. Technical assistance in matching customer needs to the correct film; consistent high quality installs and close communication with our customer during all phases of a project to resolve any problems are all key elements to a successful project. 3M is the only manufacturer with Canadian technical staff to assist local Dealer/Applicators with any local technical issues.
3. 3M's comprehensive warranty, which covers film replacement as well as removal and replacement labour, ensures that our customers will have peace of mind for the up to 15 years. With UV protection built into our adhesive layer, films can possibly last many years beyond the warranty period.
4. Our Canadian distributor is able to provide central billing and project coordination services across Canada for commercial customers to ensure that they get what you specify at multiple locations.
